-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Priority

1. Applicant is advised of possible benefits under 35 U.S.C. 119(a)-(d), wherein an application for patent filed in the United States may be entitled to the benefit of the filing date of a prior application filed in a foreign country.

Claim Objections

2. Claim 2 is objected to because of the following informalities: It is suggested that the phrase "rested on a respective one of the screw members" be changed to - on which one of the screw members rests- - because it is the screw members which rest on the blocks. Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dietrich.

As shown in figures 1, 7, 8, 10, 12, 13, and 14 a plurality of blocks are disposed in the rim to support the threaded fastening members. The blocks have holes through

which the spokes extends through, and a planar surface on which the threaded fastener rests.

As shown in figures 13 and 14, the blocks may also be shaped to have an arc-shaped surface which closely rests on or conforms to the rim.

The material from which the blocks are made is not disclosed. However, to form the blocks from a carbon fiber material would have been obvious to those of ordinary skill in the art because carbon fiber is light and strong, and could be made to have great compression strength and therefore would be a suitable material for use in a wheel.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references show other wheel rim assemblies.
